

The Formtek Peer Association Extension 2.3 release is now available for Alfresco 5.1.x.

- **The Formtek Peer Association Extension** allows you to create associations between documents and folders in Alfresco. If an item has associations, an Associations panel is displayed in the item's Details window with a link to each associated document or folder.
- A typical use case is to associate a master or published document with the supporting documents contributing to its construction.
- Current customers of the Formtek Peer Association Extension may download the software and documentation from their account at [Formtek Support](#).

New in this release are the capabilities to:

- Associate to and from a folder
- Display different status icons depending on whether the item has associations, is an association for another item, or both
- View the list of documents and folders where an item is being associated, in addition to viewing its own list of associations
- Download an item's associations as a zip file

Play our YouTube Video for a Demonstration of Peer Association
