

ABOUT FORMTEK

HIGHLIGHTS

Ensure data integrity through robust security and access control

Increase productivity through collaboration and information reuse

Allow users to quickly search for and retrieve all types of content

Make the right information available to the right users at the right time

Scale and adapt quickly to changing needs

Manage all engineering documents, drawings, and AutoCAD files

Implement records management to facilitate compliance with corporate policies and Government regulations

Extend the capabilities of your ECM implementation

Formtek provides Content Management software and services to engineering, manufacturing, aerospace, and other markets. Our capabilities and experience, particularly in the areas of content repository services, document management, and engineering drawing management have helped both small organizations as well as large global enterprises manage their most important information assets.

Formtek solutions are built on technology platforms that are open and adaptable to complex IT environments. Our strength is in understanding the complex requirements of managing content within sophisticated operations, and delivering secure and stable solutions to support those requirements.

Formtek's Content Repository Services software technology – Formtek | Orion - aggregates and organizes all data within an organization, regardless of source, and creates a virtual vault with a very high level of system control, security, scalability, and reliability. The Formtek | Orion Software Development Kit (SDK) provides extensive capabilities for implementing a transparent and flexible content repository capability throughout an organization that allows users to connect with relevant information regardless of application or method used.

Commencing in 2007, Formtek became an Alfresco® Partner. The Alfresco Digital Business Platform is an open, modern, secure platform that is easy to build on, integrate and extend. It intelligently activates process and content throughout the enterprise. Alfresco provides the fastest path for people to interact with information and for companies to respond to changing business needs.

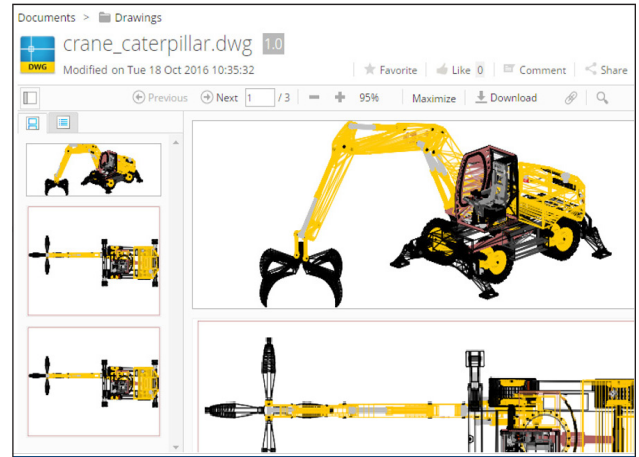

Since 2011, Formtek has been an Ephesoft® Authorized Partner. Ephesoft is the leader in 100% browser-based capture solutions. Ephesoft's advanced capture solutions automatically classify, separate, sort and extract data from documents in paper and electronic formats. Formtek has integrated Ephesoft capture into Enterprise Content Management solutions based on Alfresco.

Formtek's Professional Services organization offers a flexible approach to ECM solution delivery that is customer-focused and tailored to your specific business needs. Our services include requirements definition, software customization and integration, documentation, training, and project management. Our Support team provides personalized and rapid response to client issues and questions.

Formtek Products for Alfresco

The **Formtek Engineering Data Management Solution** works in conjunction with Alfresco to provide a secure, enterprise engineering document, drawing and AutoCAD® file management and collaboration foundation that allows a business to effectively manage all engineering documentation across its distributed enterprise.

The Formtek EDM Solution includes the **EDM Module** - which automatically extracts and maps AutoCAD block attributes to Alfresco, renders AutoCAD and MicroStation files for viewing within Alfresco, and manages the relationship between the base drawing and its external references (or XRefs) - and the **EDM Connector for AutoCAD** - which allows users to interact with the Alfresco content repository directly from within the AutoCAD application.

The Formtek Auditing Extension

The **Formtek Extensions for Alfresco** are designed to increase the capabilities and productivity of your Alfresco implementation.

- **Auditing** provides a complete audit log for every file and folder within Alfresco. The Extension is integrated within the Alfresco Share interface and, when selected, displays the audit log for a file or folder, including the action performed, the date and time the action occurred, and the user that performed the action.
- **CAD Rendering** provides custom transformers that render AutoCAD and MicroStation files for viewing within Alfresco.
- **File Linking** allows a single document stored in Alfresco to be accessible from multiple locations without physically duplicating the document.
- **PDF Rendering** provides a PDF rendition with watermarking, if desired, of an Alfresco-supported file type.
- **Peer Association** makes it possible for associations to be established between documents within Alfresco Share.
- **Version Browser** allows a user to select any older document version in Alfresco Share and view its Web preview and associated metadata, or download that version.
